

CANONICAL LESSON

V7_A_N01 - Operate the Agricultural Intelligence Platform

Decision-centred foundations for accountable sector intelligence

Production Unit	PU-B07-C06
Notebook	V7_A_N01
Status	Controlled educational draft v0.1
Data boundary	Synthetic instructional data only

Central decision: Operate agricultural intelligence as a governed decision service with named owners, review gates, escalation paths, and explicit authority boundaries.

Learning outcomes

Why this matters

A platform can centralize error as easily as insight when ownership, escalation, and decision rights are unclear.

The analytical workflow is useful only when evidence, uncertainty, authority, and action are connected explicitly. The model supports professional judgement; it does not replace accountable institutional authority.

Worked cross-sector example

A national crop-monitoring platform combines synthetic field, weather, and market signals to prioritize authorized agronomic review.

Boundary: The example supports learning and review. It does not constitute an official statistic, eligibility determination, enforcement action, clinical judgement, or operational authorization.

Practice and reflection

- 1.
- Add recovery-point checks.
- 2.

- Separate technical success from statistical acceptance.
- 3.
- Design a release rollback.

Answer key

- 1.
- Compare the last verified backup and replicated checkpoint with the approved recovery-point objective.
- 2.
- Technical success means the workflow ran; statistical acceptance requires validated concepts, estimates, uncertainty, confidentiality, and authority.
- 3.
- Preserve the prior release, immutable inputs, code version, approvals, rollback owner, trigger, and post-incident review.

Operational readiness checklist

- Purpose and decision owner are named.
- Evidence definitions, provenance, and lawful access are documented.
- Uncertainty and abstention are visible.
- Human review, escalation, monitoring, incident response, and retirement are assigned.
- Equity, accessibility, security, and sector-specific approval are complete.
