

EXECUTIVE BRIEF

Core Agricultural Indicators With Denominators

What leaders should authorize, require, and refuse

Production Unit	PU-B07-C09
Decision status	Controlled learning asset
Audience	Executives, programme owners, statisticians, technical leads
Data	Synthetic examples only

Executive takeaway: Publish agricultural indicators only with explicit numerators, denominators, populations, reference periods, geographic units, and revision status.

Why it matters

Indicators without defensible denominators invite false comparisons across crops, districts, seasons, and reporting systems.

Illustrative application

A crop-loss rate identifies affected hectares as the numerator and assessed planted hectares—not all land—as the denominator.

Minimum approval conditions

- Named accountable owner and lawful purpose
- Defined evidence, provenance, reference period, population, and geography
- Decision-relevant validation and visible uncertainty
- Documented abstention, referral, override, and incident processes
- Accessibility, equity, security, retention, and retirement review

Non-negotiable boundary

The analytical system may inform review. It may not independently authorize benefits, sanctions, enforcement, clinical treatment, school exclusion, displacement, or another consequential action.
