

CANONICAL LESSON

Seasonal Crop Production Forecasting

Decision-centred foundations for accountable sector intelligence

Production Unit	PU-B07-C11
Notebook	V7_A_N06
Status	Controlled educational draft v0.1
Data boundary	Synthetic instructional data only

Central decision: Forecast seasonal crop production with time-aware validation, transparent baselines, calibrated uncertainty, and explicit revision and abstention rules.

Learning outcomes

Why this matters

A precise point forecast can mislead procurement and food-security planning when seasonality, revisions, or uncertainty are hidden.

The analytical workflow is useful only when evidence, uncertainty, authority, and action are connected explicitly. The model supports professional judgement; it does not replace accountable institutional authority.

Worked cross-sector example

A seasonal production forecast is compared with historical and trend baselines, then withheld when interval coverage or input quality fails.

Boundary: The example supports learning and review. It does not constitute an official statistic, eligibility determination, enforcement action, clinical judgement, or operational authorization.

Practice and reflection

- 1.
- Implement rolling-origin validation.
- 2.
- Compare yield-first and direct-production models.
- 3.

- Add a drought-shock stress test.
- 4.
- Explain why import quantities cannot be derived mechanically from the point forecast.

Answer key

- 1.
- At each historical origin, train only on prior seasons and score the next defined horizon.
- 2.
- Yield-first preserves area $\times$ yield structure; direct models may fit production but obscure components—compare both out of time.
- 3.
- Apply plausible rainfall/yield shocks and report error/interval degradation.
- 4.
- Trade decisions also require stocks, consumption, losses, prices, logistics, policy objectives, uncertainty, and authority.

Operational readiness checklist

- Purpose and decision owner are named.
- Evidence definitions, provenance, and lawful access are documented.
- Uncertainty and abstention are visible.
- Human review, escalation, monitoring, incident response, and retirement are assigned.
- Equity, accessibility, security, and sector-specific approval are complete.
