

EXECUTIVE BRIEF

Rainfall and Drought Impact Monitoring

What leaders should authorize, require, and refuse

Production Unit	PU-B07-C13
Decision status	Controlled learning asset
Audience	Executives, programme owners, statisticians, technical leads
Data	Synthetic examples only

Executive takeaway: Link rainfall anomalies to exposure and observed agricultural impacts before escalating drought-related decisions.

Why it matters

Rainfall deficit alone does not prove crop loss, household impact, or the need for a specific intervention.

Illustrative application

A rainfall deficit is combined with crop calendars, geographic coverage, and field observations before a district is referred for review.

Minimum approval conditions

- Named accountable owner and lawful purpose
- Defined evidence, provenance, reference period, population, and geography
- Decision-relevant validation and visible uncertainty
- Documented abstention, referral, override, and incident processes
- Accessibility, equity, security, retention, and retirement review

Non-negotiable boundary

The analytical system may inform review. It may not independently authorize benefits, sanctions, enforcement, clinical treatment, school exclusion, displacement, or another consequential action.
