

EXECUTIVE BRIEF

Earlier Signals, Safer Escalation

What leaders should authorize, require, and refuse

Production Unit	PU-B07-C14
Decision status	Controlled learning asset
Audience	Executives, programme owners, statisticians, technical leads
Data	Synthetic examples only

Executive takeaway: Combine crop-risk and food-security signals into an early-warning workflow with severity, persistence, corroboration, capacity, and escalation controls.

Why it matters

Early-warning systems can generate harmful false alarms or dangerous silence when thresholds and escalation duties are unclear.

Illustrative application

A persistent multi-source risk signal triggers a time-bound analyst review rather than an automatic food-security classification.

Minimum approval conditions

- Named accountable owner and lawful purpose
- Defined evidence, provenance, reference period, population, and geography
- Decision-relevant validation and visible uncertainty
- Documented abstention, referral, override, and incident processes
- Accessibility, equity, security, retention, and retirement review

Non-negotiable boundary

The analytical system may inform review. It may not independently authorize benefits, sanctions, enforcement, clinical treatment, school exclusion, displacement, or another consequential action.
