

CANONICAL LESSON

Agricultural Census and Frame Intelligence

Decision-centred foundations for accountable sector intelligence

Production Unit	PU-B07-C16
Notebook	V7_A_N11
Status	Controlled educational draft v0.1
Data boundary	Synthetic instructional data only

Central decision: Govern agricultural census and frame intelligence through explicit units, coverage rules, update cycles, duplication controls, and traceable frame maintenance.

Learning outcomes

Why this matters

A frame can look complete while omitting new farms, duplicating holdings, or confusing households, parcels, and enterprises.

The analytical workflow is useful only when evidence, uncertainty, authority, and action are connected explicitly. The model supports professional judgement; it does not replace accountable institutional authority.

Worked cross-sector example

A farm frame separates households, holdings, parcels, and establishments while recording births, deaths, splits, merges, and coverage gaps.

Boundary: The example supports learning and review. It does not constitute an official statistic, eligibility determination, enforcement action, clinical judgement, or operational authorization.

Practice and reflection

- 1.
- Replace the regional quota with a workload budget.
- 2.

- Test a different staleness normalization.
- 3.
- Explain why administrative counts cannot automatically replace listing counts.
- 4.
- Draft a field-verification outcome code list.

Answer key

Operational readiness checklist

- Purpose and decision owner are named.
- Evidence definitions, provenance, and lawful access are documented.
- Uncertainty and abstention are visible.
- Human review, escalation, monitoring, incident response, and retirement are assigned.
- Equity, accessibility, security, and sector-specific approval are complete.
