

EXECUTIVE BRIEF

Maternal and Child Health: Support, Not Scoring

What leaders should authorize, require, and refuse

Production Unit	PU-B07-C23
Decision status	Controlled learning asset
Audience	Executives, programme owners, statisticians, technical leads
Data	Synthetic examples only

Executive takeaway: Use maternal and child health analytics to support timely human review and referral without scoring dignity, eligibility, or clinical worth.

Why it matters

Individual risk scores can stigmatize patients or silently substitute for clinical judgment and informed care.

Illustrative application

A care-gap signal routes an authorized outreach review while the clinician retains diagnosis and treatment authority.

Minimum approval conditions

- Named accountable owner and lawful purpose
- Defined evidence, provenance, reference period, population, and geography
- Decision-relevant validation and visible uncertainty
- Documented abstention, referral, override, and incident processes
- Accessibility, equity, security, retention, and retirement review

Non-negotiable boundary

The analytical system may inform review. It may not independently authorize benefits, sanctions, enforcement, clinical treatment, school exclusion, displacement, or another consequential action.
