

EXERCISES AND EXACT SOLUTIONS

Medicines Before Stock-Out

Independent practice, facilitated discussion, and assessment reference

Production Unit	PU-B07-C25
Notebook	V7_B_N05
Version	0.1
Assessment boundary	Learning evidence—not operational authorization

Instructions

Complete Part A before consulting the solutions. State assumptions explicitly. Where evidence is insufficient, write an abstention or escalation response rather than inventing precision.

Exercise 1

Add expiry and batch constraints.

- Required output: a concise decision-ready response with owner, evidence, uncertainty, and boundary where applicable.

Exercise 2

Model pipeline orders.

- Required output: a concise decision-ready response with owner, evidence, uncertainty, and boundary where applicable.

Exercise 3

Add service-level targets.

- Required output: a concise decision-ready response with owner, evidence, uncertainty, and boundary where applicable.

Exercise 4

Explain why low stock does not justify automatic substitution.

- Required output: a concise decision-ready response with owner, evidence, uncertainty, and boundary where applicable.

Exact solutions and scoring guide

Solution 1

Exclude expired/soon-expiring stock and preserve batch traceability.

Solution 2

Add confirmed quantity and expected arrival with uncertainty.

Solution 3

Link safety stock to acceptable stock-out risk and criticality.

Solution 4

Substitution requires clinical/pharmacy protocols, indications, interactions, dosage forms, authorization, and communication.

Scoring rubric

Criterion	Strong evidence	Revision required
Decision framing	Owner, action, horizon, authority named	Model output substituted for decision
Evidence	Concepts, grain, provenance, limits explicit	Data treated as self-explanatory
Uncertainty	Abstention/escalation used appropriately	False precision or hidden limitations
Governance	Human authority and safeguards retained	Authority silently delegated
