

EXECUTIVE BRIEF

Climate Signals Before Disease Surges

What leaders should authorize, require, and refuse

Production Unit	PU-B07-C28
Decision status	Controlled learning asset
Audience	Executives, programme owners, statisticians, technical leads
Data	Synthetic examples only

Executive takeaway: Use climate signals for disease preparedness only when exposure, lag, surveillance quality, and causal limits are explicit.

Why it matters

Climate association alone does not prove a disease surge or justify a specific intervention.

Illustrative application

Rainfall and temperature anomalies inform readiness after epidemiological and geographic corroboration.

Minimum approval conditions

- Named accountable owner and lawful purpose
- Defined evidence, provenance, reference period, population, and geography
- Decision-relevant validation and visible uncertainty
- Documented abstention, referral, override, and incident processes
- Accessibility, equity, security, retention, and retirement review

Non-negotiable boundary

The analytical system may inform review. It may not independently authorize benefits, sanctions, enforcement, clinical treatment, school exclusion, displacement, or another consequential action.
