

CANONICAL LESSON

Nutrition Evidence With Dignity

Decision-centred foundations for accountable sector intelligence

Production Unit	PU-B07-C29
Notebook	V7_B_N09
Status	Controlled educational draft v0.1
Data boundary	Synthetic instructional data only

Central decision: Produce nutrition intelligence with valid measures, reference standards, uncertainty, privacy, dignity, and authorized care pathways.

Learning outcomes

Why this matters

Poorly governed nutrition scoring can stigmatize people, expose sensitive information, or replace professional assessment.

The analytical workflow is useful only when evidence, uncertainty, authority, and action are connected explicitly. The model supports professional judgement; it does not replace accountable institutional authority.

Worked cross-sector example

A nutrition signal supports confidential outreach and clinical assessment without labeling a child or household.

Boundary: The example supports learning and review. It does not constitute an official statistic, eligibility determination, enforcement action, clinical judgement, or operational authorization.

Practice and reflection

- 1.
- Add survey weights.
- 2.
- Audit measurement quality.
- 3.

- Protect privacy.

Answer key

- 1.
- Use design-weighted prevalence and design-consistent intervals.
- 2.
- Check training, calibration, digit preference, biological plausibility, missingness, and repeat measures.
- 3.
- Aggregate safely, minimize fields, control access, suppress small cells, and prohibit re-identification or punitive use.

Operational readiness checklist

- Purpose and decision owner are named.
- Evidence definitions, provenance, and lawful access are documented.
- Uncertainty and abstention are visible.
- Human review, escalation, monitoring, incident response, and retirement are assigned.
- Equity, accessibility, security, and sector-specific approval are complete.
