

EXECUTIVE BRIEF

V7_B_N12 - Health Surveys and Small-Area Evidence

What leaders should authorize, require, and refuse

Production Unit	PU-B07-C32
Decision status	Controlled learning asset
Audience	Executives, programme owners, statisticians, technical leads
Data	Synthetic examples only

Executive takeaway: Use health surveys and small-area evidence with valid design, weights, precision, model assumptions, and disclosure safeguards.

Why it matters

Small-area precision can be overstated when design, sparsity, or model dependence is hidden.

Illustrative application

District estimates combine survey design evidence with transparent uncertainty and suppression rules.

Minimum approval conditions

- Named accountable owner and lawful purpose
- Defined evidence, provenance, reference period, population, and geography
- Decision-relevant validation and visible uncertainty
- Documented abstention, referral, override, and incident processes
- Accessibility, equity, security, retention, and retirement review

Non-negotiable boundary

The analytical system may inform review. It may not independently authorize benefits, sanctions, enforcement, clinical treatment, school exclusion, displacement, or another consequential action.
