

EXECUTIVE BRIEF

V7_B_N14 - Evaluate What Changed in Health

What leaders should authorize, require, and refuse

Production Unit	PU-B07-C34
Decision status	Controlled learning asset
Audience	Executives, programme owners, statisticians, technical leads
Data	Synthetic examples only

Executive takeaway: Evaluate health change using explicit counterfactual logic, implementation evidence, equity, uncertainty, and decision relevance.

Why it matters

Before-and-after change alone cannot establish causation or guide scale-up safely.

Illustrative application

A programme assessment separates observed change from plausible programme contribution.

Minimum approval conditions

- Named accountable owner and lawful purpose
- Defined evidence, provenance, reference period, population, and geography
- Decision-relevant validation and visible uncertainty
- Documented abstention, referral, override, and incident processes
- Accessibility, equity, security, retention, and retirement review

Non-negotiable boundary

The analytical system may inform review. It may not independently authorize benefits, sanctions, enforcement, clinical treatment, school exclusion, displacement, or another consequential action.
