

CANONICAL LESSON

Attendance and Dropout Early-Warning Support

Decision-centred foundations for accountable sector intelligence

Production Unit	PU-B07-C36
Notebook	V7_C_N01
Status	Controlled educational draft v0.1
Data boundary	Synthetic instructional data only

Central decision: Use attendance and dropout early-warning evidence to organize timely, proportionate support while preserving uncertainty, dignity, due process, and accountable educational authority.

Learning outcomes

Why this matters

A risk score can stigmatize learners or trigger punitive action when context, uncertainty, and human review are missing.

The analytical workflow is useful only when evidence, uncertainty, authority, and action are connected explicitly. The model supports professional judgement; it does not replace accountable institutional authority.

Worked cross-sector example

A school team reviews sustained absence with contextual evidence before offering support through an authorized pathway.

Boundary: The example supports learning and review. It does not constitute an official statistic, eligibility determination, enforcement action, clinical judgement, or operational authorization.

Practice and reflection

- 1.
- Replace the top-three rule with different capacities by school.

- 2.
- Add a data-latency abstention rule.
- 3.
- Explain why support_contact must not be interpreted as successful intervention.
- 4.
- Write a retention and deletion schedule.

Answer key

Operational readiness checklist

- Purpose and decision owner are named.
- Evidence definitions, provenance, and lawful access are documented.
- Uncertainty and abstention are visible.
- Human review, escalation, monitoring, incident response, and retirement are assigned.
- Equity, accessibility, security, and sector-specific approval are complete.
