

CANONICAL LESSON

Keep Learning Going When Hazards Arrive

Decision-centred foundations for accountable sector intelligence

Production Unit	PU-B07-C45
Notebook	V7_C_N10
Status	Controlled educational draft v0.1
Data boundary	Synthetic instructional data only

Central decision: Protect learning continuity by combining hazard, exposure, vulnerability, accessibility, preparedness, response capacity, uncertainty, and authorized action.

Learning outcomes

Why this matters

Hazard alerts without exposure, capacity, or authority can cause unnecessary closure, unequal disruption, or delayed protective action.

The analytical workflow is useful only when evidence, uncertainty, authority, and action are connected explicitly. The model supports professional judgement; it does not replace accountable institutional authority.

Worked cross-sector example

A district tests heat, flood, access, and continuity scenarios before activating a proportionate school-safety plan.

Boundary: The example supports learning and review. It does not constitute an official statistic, eligibility determination, enforcement action, clinical judgement, or operational authorization.

Practice and reflection

- 1.
- Add evacuation accessibility.
- 2.
- Separate hazard and exposure.
- 3.

- Define closure authority.

Answer key

- 1.
- Audit accessible routes, transport, communications, assistance, shelter, sanitation, and drills.
- 2.
- Hazard is the event; exposure is who/assets are present; vulnerability and capacity shape consequences.
- 3.
- Closure follows competent authority, verified conditions, proportionality, continuity plans, communication, and review.

Operational readiness checklist

- Purpose and decision owner are named.
- Evidence definitions, provenance, and lawful access are documented.
- Uncertainty and abstention are visible.
- Human review, escalation, monitoring, incident response, and retirement are assigned.
- Equity, accessibility, security, and sector-specific approval are complete.
