

EXECUTIVE BRIEF

Shelter Before Disaster

What leaders should authorize, require, and refuse

Production Unit	PU-B07-C54
Decision status	Controlled learning asset
Audience	Executives, programme owners, statisticians, technical leads
Data	Synthetic examples only

Executive takeaway: Plan emergency shelter by connecting hazards, exposure, vulnerability, accessibility, capacity, routes, uncertainty, safeguarding, and authorized emergency action.

Why it matters

A shelter count alone can fail when locations are unsafe, inaccessible, undersized, or disconnected from transport and protection services.

Illustrative application

An emergency team tests flood scenarios against population needs, accessible routes, shelter capacity, and backup options.

Minimum approval conditions

- Named accountable owner and lawful purpose
- Defined evidence, provenance, reference period, population, and geography
- Decision-relevant validation and visible uncertainty
- Documented abstention, referral, override, and incident processes
- Accessibility, equity, security, retention, and retirement review

Non-negotiable boundary

The analytical system may inform review. It may not independently authorize benefits, sanctions, enforcement, clinical treatment, school exclusion, displacement, or another consequential action.
