

CANONICAL LESSON

Land Signals With Due Process

Decision-centred foundations for accountable sector intelligence

Production Unit	PU-B07-C58
Notebook	V7_D_N08
Status	Controlled educational draft v0.1
Data boundary	Synthetic instructional data only

Central decision: Use land and tenure signals only to support authorized review with provenance, confidence, competing claims, privacy, notice, appeal, and due process.

Learning outcomes

Why this matters

Automated matching or imagery can create false certainty, expose claimants, and trigger dispossession without lawful review.

The analytical workflow is useful only when evidence, uncertainty, authority, and action are connected explicitly. The model supports professional judgement; it does not replace accountable institutional authority.

Worked cross-sector example

A land agency reviews multiple records and claimant evidence before referring a disputed parcel for lawful adjudication.

Boundary: The example supports learning and review. It does not constitute an official statistic, eligibility determination, enforcement action, clinical judgement, or operational authorization.

Practice and reflection

- 1.
- Protect claimant data.
- 2.
- Explain administrative absence.
- 3.

- Design dispute safeguards.

Answer key

- 1.
- Minimize, encrypt, role-restrict, log access, separate public/private fields, and apply lawful retention.
- 2.
- Customary, communal, informal, inherited, displaced, or unregistered rights may exist outside the register.
- 3.
- Provide notice, access to records, human adjudication, representation, appeal, non-discrimination, and prohibition on automated disposition.

Operational readiness checklist

- Purpose and decision owner are named.
- Evidence definitions, provenance, and lawful access are documented.
- Uncertainty and abstention are visible.
- Human review, escalation, monitoring, incident response, and retirement are assigned.
- Equity, accessibility, security, and sector-specific approval are complete.
