

EXECUTIVE BRIEF

Risk Triage Is Not a Building Certificate

What leaders should authorize, require, and refuse

Production Unit	PU-B07-C60
Decision status	Controlled learning asset
Audience	Executives, programme owners, statisticians, technical leads
Data	Synthetic examples only

Executive takeaway: Use building-risk triage to prioritize qualified inspection—not to certify safety—while preserving evidence, uncertainty, occupancy, vulnerability, escalation, and legal authority.

Why it matters

A risk score can provide false reassurance or trigger evacuation and enforcement without qualified inspection and due process.

Illustrative application

A screening tool routes a potentially unsafe building to an authorized engineer and emergency pathway for inspection.

Minimum approval conditions

- Named accountable owner and lawful purpose
- Defined evidence, provenance, reference period, population, and geography
- Decision-relevant validation and visible uncertainty
- Documented abstention, referral, override, and incident processes
- Accessibility, equity, security, retention, and retirement review

Non-negotiable boundary

The analytical system may inform review. It may not independently authorize benefits, sanctions, enforcement, clinical treatment, school exclusion, displacement, or another consequential action.
