

CANONICAL LESSON

Risk Triage Is Not a Building Certificate

Decision-centred foundations for accountable sector intelligence

Production Unit	PU-B07-C60
Notebook	V7_D_N10
Status	Controlled educational draft v0.1
Data boundary	Synthetic instructional data only

Central decision: Use building-risk triage to prioritize qualified inspection—not to certify safety—while preserving evidence, uncertainty, occupancy, vulnerability, escalation, and legal authority.

Learning outcomes

Why this matters

A risk score can provide false reassurance or trigger evacuation and enforcement without qualified inspection and due process.

The analytical workflow is useful only when evidence, uncertainty, authority, and action are connected explicitly. The model supports professional judgement; it does not replace accountable institutional authority.

Worked cross-sector example

A screening tool routes a potentially unsafe building to an authorized engineer and emergency pathway for inspection.

Boundary: The example supports learning and review. It does not constitute an official statistic, eligibility determination, enforcement action, clinical judgement, or operational authorization.

Practice and reflection

- 1.
- Add occupancy type.
- 2.
- Audit fairness.
- 3.

- Explain certificate boundary.

Answer key

- 1.
- Apply code-relevant risk factors by use without inventing requirements.
- 2.
- Compare error and delay burdens across applicant/place types, inspect proxies, and provide review/appeal.
- 3.
- Only the authorized authority and qualified professionals can inspect, approve, certify, restrict, or enforce.

Operational readiness checklist

- Purpose and decision owner are named.
- Evidence definitions, provenance, and lawful access are documented.
- Uncertainty and abstention are visible.
- Human review, escalation, monitoring, incident response, and retirement are assigned.
- Equity, accessibility, security, and sector-specific approval are complete.
