

CANONICAL LESSON

# National Habitat Intelligence Capstone

Decision-centred foundations for accountable sector intelligence

|                 |                                   |

| Status          | Controlled educational draft v0.1 |
| Data boundary   | Synthetic instructional data only |

**Central decision:** Integrate governed habitat evidence on housing, land, services, infrastructure, mobility, exposure, safety, finance, evaluation, uncertainty, and institutional authority into a national decision product.

## Learning outcomes

### Why this matters

Integration without governance can centralize spatial error, expose vulnerable populations, erase local context, and amplify harmful land or housing decisions.

The analytical workflow is useful only when evidence, uncertainty, authority, and action are connected explicitly. The model supports professional judgement; it does not replace accountable institutional authority.

### Worked cross-sector example

A national brief connects geographic evidence, service gaps, risks, investment scenarios, responsible owners, safeguards, and review dates.

**Boundary:** The example supports learning and review. It does not constitute an official statistic, eligibility determination, enforcement action, clinical judgement, or operational authorization.

## Practice and reflection

- 1.
- Design a non-punitive service-gap queue.
- 2.
- Combine hazard and shelter capacity.

- 3.
- Audit displacement in an upgrading programme.

## Answer key

- 1.
- Aggregate need, verify with communities, separate service planning from land enforcement, protect tenure and locations, and provide correction.
- 2.
- Keep hazard, exposure, vulnerability, accessibility, travel, occupancy, and verified capacity distinct.
- 3.
- Track rents, evictions, tenure, mobility, business turnover, service access, participation, and spillovers across affected groups.

## Operational readiness checklist

- Purpose and decision owner are named.
- Evidence definitions, provenance, and lawful access are documented.
- Uncertainty and abstention are visible.
- Human review, escalation, monitoring, incident response, and retirement are assigned.
- Equity, accessibility, security, and sector-specific approval are complete.
